

The screenshot displays the Workspace LT simulation environment. The main window shows a 3D model of a robotic press. Three Notepad windows are open, providing detailed simulation data:

**Job\_Summary.TXT - Notepad**

Exercise 8 - Throughput Job Summary:  
 Generated on 12/07/2021 (dd/mm/yyyy) at 16:22:52 (hh/mm/ss)  
 by workspace LT (C) WAT Solutions.  
 These simulation results should not be taken as a guarantee of production.

Run-In time (hours)	0.010
Run duration (hours)	0.150
Use downtime	off
Number of jobs during run	24
Number of jobs per hour	160.000

**Robot\_Event\_Summary.TXT - Notepad**

Exercise 8 - Throughput - Robot.KL Event Summary:  
 Generated on 12/07/2021 (dd/mm/yyyy) at 16:22:42 (hh/mm/ss)  
 by workspace LT (C) WAT Solutions.  
 These simulation results should not be taken as a guarantee of production.

Step	Description	Time(sec)	Usage
1	'robot Move Home'	0.000	'ROBOT_MOTION'
2	'robot Move Home Posn'	0.796	'ROBOT_MOTION'

## Exercise 8 - Throughput Analysis

### Objectives:

- Create basic robot programs in simulation.
- Understanding Logic statements.
- Using an end of arm gripper to manipulate parts.
- Using assigned variables and a Constance
- Using routines to assign various robot tasks.
- Use of Inputs and outputs to control the simulation flow.
- Robot program optimization using throughput analysis

### Materials;

- Workspace LT<sup>®</sup> simulation software.
- Workspace LT<sup>®</sup> project file "Exercise 8 - Throughput Analysis.WSLT".
- Manual "Workspace LT<sup>®</sup> User Guide.pdf".

### Helpful Hint; Before starting this exercise, review the User Guide sections;

- 6.3 - Comments and Workspace commands
- 6.4.5 Variables
- 6.7.1 - INTEGER and REAL functions
- 8.2.1 DIN..DOUT
- 9.1.1 - IF ... ENDIF
- 9.2.3 - WHILE ... ENDWHILE
- 14.15 - Creating Mechanisms
- 15. - Throughput Statistics

- 1) Procedure: Create a Robot track
  - a) Open Workspace LT simulation software.
  - b) Open  the project file "Exercise 8 - Throughput Analysis.WSLT".
  - c) Add a track for robot ABB\_1200\_5\_90. Enter the Track Name "Robot" and select the Language "KAREL 2".
  - d) Open the text editor to view the program track Robot.KL. Using the mouse , select the "Robot.KL" twice in rapid successions to open the Robot.KL track in the program editor.
  - e) Insert the following text to complete the robot program.

```
PROGRAM Robot
-- Workspace LT KAREL 2 Program for ABB_1200_5_90 Robot
```

```

CONST
  PARTSTOTAL=27

VAR
  PartsCount : INTEGER
  ROW : INTEGER
  COLUMN : INTEGER

e) Save the project model .

- f) Set throughput options. Using the mouse  select **Options** found on the upper tool bar. From the drop down menu use the mouse  to select **Throughput Options** then select **Throughput Settings...**. The **Throughput Settings** menu box will appear. Change "Run time (hours)" to 0.04. Change "Run duration (hours)" to 0.12. Using the mouse  select  .
- g) Reload  the model before continuing.
- h) Using the mouse  select  (Play simulation) observe the simulation until the end of the simulation run.
- i) The  Enter name of file for job data pop-up menu will appear. Using the mouse  select  to accept the default values. The "Job\_Summary (Read Only).TXT" text editor box will appear. Review the contents and then using the mouse  select  to close the text editor. The "Robot\_Event\_Summary (Read Only).TXT" text editor box will appear. Review the contents and then using the mouse  select  to close the text editor. The "Press\_Event\_Summary (Read Only).TXT" text editor box will appear. Review the contents and then using the mouse  select  to close the text editor. The Gant chart of the process will appear. Review the contents and then using the mouse  select  to close the Gant chart.
- j) Reload  the model before continuing.
- k) From the upper tool bar use the mouse  to select **Simulate**. and then using the mouse  again select **Run Simulation Blind**. Wait for the simulation to end.
- l) The  Enter name of file for job data pop-up menu will appear. Using the mouse  select  to accept the default values. The "Job\_Summary (Read Only).TXT" text editor box will appear. Review the contents and then using the mouse  select  to close the text editor. The "Robot\_Event\_Summary (Read Only).TXT" text editor box will appear. Review the contents and then using the mouse  select  to close the text editor. The "Press\_Event\_Summary (Read Only).TXT" text editor box will appear. Review the contents and then using the mouse  select  to close the text editor. The Gant chart of the process will appear. Review the contents and then using the mouse  select  to close the Gant chart.
- m) Reload  the model before continuing.
- n) Using various \$MOTYPE's, \$TERMYPE's and \$SPEED's commands to achieve a lower cycle time increasing the number of jobs per hour (optimization). Lower speeds and linear motions are required when the EOAT enters a confined space or when approaching other objects. can now be replayed in any Windows compatible media player program.
